

Episode 01 — The Mystery of the Magnetic Cat

Grade 3 · Ages 8–9 · FREE

Companion Worksheet · Magnets & Magnetic Fields

Name: _____

Date: _____

Grade: _____

What You Will Learn

After watching Episode 01, you will be able to:

1. Explain what a magnetic field is and how it works
2. Name the three ferromagnetic metals (hint: I Need Chocolate!)
3. Describe how opposite poles attract and same poles repel

Section 1

Key Vocabulary — Match each term to its definition

Term		Definition
1. Magnetic Field	→	The invisible pushing-and-pulling zone around every magnet
2. Ferromagnetic	→	A metal naturally attracted to magnets (iron, nickel, or cobalt)
3. Conductor	→	A material that allows electricity or magnetic force to pass through it
4. Poles	→	The two ends of a magnet — North (N) and South (S)
5. Repel	→	To push away — happens when same magnetic poles face each other
6. Attract	→	To pull toward — happens when opposite magnetic poles face each other

Section 2

Fill in the Blanks — Complete each sentence

1. Only three metals are naturally magnetic: _____, _____, and _____.
2. Pip's memory trick: _____ (I = Iron, N = Nickel, C = _____)
3. A magnetic field can pass through _____, paper, plastic, and wood.
4. When Pip brought the fridge magnet close to a steel paper clip, the clip moved BEFORE the magnet touched it. This is because of the magnetic _____.

5. North pole + South pole = they _____ (pull together).
6. North pole + North pole = they _____ (push apart).
7. Whiskers's collar tag was magnetic because stainless steel contains _____.

Section 3	True or False — Circle the correct answer
------------------	--

Statement	True	False
All metals are magnetic.	☐	☐
A magnetic field can work through the air without touching an object.	☐	☐
A copper penny will stick to a horseshoe magnet.	☐	☐
A steel paper clip will stick to a magnet.	☐	☐
North and South magnetic poles attract each other.	☐	☐
North and North magnetic poles attract each other.	☐	☐
Magnetic fields can pass through your hand to reach iron objects.	☐	☐
Aluminum is one of the three ferromagnetic metals.	☐	☐

Section 4	Sort It! — Write each item in the correct column
------------------	---

Items: steel nail · copper penny · plastic dinosaur · aluminum soda can · wooden block · steel paper clip · rubber band · iron fridge door

MAGNETIC	NOT MAGNETIC
(contains iron, nickel, or cobalt)	(no iron, nickel, or cobalt)

Section 5	Short Answer — Answer in your own words
------------------	--

1. In your own words, explain what a magnetic field is:

2. Why did the aluminum soda can NOT stick to Pip's magnet?

3. What does each letter in 'I Need Chocolate' stand for?

4. What happens when you put two SAME poles of a magnet together?

5. How did Pip solve the Mystery of the Magnetic Cat?

Section 6

Try It At Home — Magnetic Scavenger Hunt

What You Need

Any fridge magnet from your kitchen. That's it.

What To Do

Step 1: Walk around your house with the fridge magnet.

Step 2: Touch it to 8 different objects — cutlery, coins, toys, door handles, cans.

Step 3: Record results in the table below.

What happened? _____

Object I Tested	Stick? (Y/N)	Made of...?	Magnetic? (Y/N)
1. _____	Y / N	_____	Y / N
2. _____	Y / N	_____	Y / N
3. _____	Y / N	_____	Y / N
4. _____	Y / N	_____	Y / N
5. _____	Y / N	_____	Y / N
6. _____	Y / N	_____	Y / N
7. _____	Y / N	_____	Y / N
8. _____	Y / N	_____	Y / N

Section 7

Reflection — Think About It

My favorite part of this episode was:	One question I still have:
_____ _____	_____ _____
Something new I learned today:	I want to learn more about:
_____ _____	_____ _____
